The Jaguar XJ-S and latterly the XJS, was produced by Jaguar from 1975 to 1996. 115,413 cars were produced during a 21-year production life. Although it never had quite the same sporting image as the E-Type, the XJS was a competent grand touring car, and more aerodynamic than the E-Type.

By 1989 more XJS variants had been produced and sold than E-Types but by 1990 sales were beginning to dip so the car was re-launched as the XJS following what was understood to be a £50 million investment programme. The XJS had almost an entirely new body-shell, which was easier to produce and galvanised.

The XJS V12’s capacity was enlarged to 6.0 Litres in May 1992 and now produced over 300 bhp. At the same time the car benefited from a revision to the rear brakes, they were now fitted with outboard rear discs.
